UBAKEL

SETUP GUIDE & RUNNING COSTS

Solar Bill Review System

Moving the system into your own accounts, step by step, and what it costs each month.

Prepared for **Baher Saad**

Prepared by **Ubakel**

Version 1.1 · October 2026

OVERVIEW

Moving the system into your accounts

Today the system runs in Ubakel's accounts. This guide moves it into accounts you own, so your reports, files and customer bills stay with your business. You set up four things; Ubakel does the rest.

You do · about 35 minutes

- Choose one Google account for the system
- Set up one folder in Google Drive
- Get a Gemini API key
- Add four connections in Make
- Tell us which inbox gets the team emails

Ubakel does

- Builds the system in your Make account
- Links it to your Drive files and connections
- Tests it with real sample bills
- Switches your form to the new system
- Turns off the old one

Have these ready

- ✓ A Google account with Gmail
- ✓ A payment card
- ✓ Your Make login
- ✓ Access to your GoHighLevel form

STEP 1 · ABOUT 2 MINUTES

Choose one Google account

The system saves reports in Google Drive, sends your team's emails from Gmail and reads the bills with Google's Gemini. Pick one Google account for all of it. A shared company account, such as `reports@yourcompany.com`, works best.

Works

Any **@gmail.com** address, or a company address run by **Google Workspace**.

Tell us first

If your company email runs on **Microsoft 365, Zoho** or another provider.

STEP 2 · ABOUT 10 MINUTES

Set up your Drive folder

Everything the system creates lives in one folder in your Google Drive. Ubakel will share two files with the Google account from Step 1: the **Report Template** and the **Run Log**. When it's done, your folder looks like this:

NetSolar – Solar Reports	you create this
Report Template	your copy of the file we share
Run Log	your copy of the file we share
Customer Reports	you create this
One folder per customer	added automatically

1. In Google Drive, click **New** → **New folder** and name it **NetSolar – Solar Reports**.
2. Open the **Report Template** we shared with you (under **Shared with me**). Click **File** → **Make a copy**, name it **Report Template**, choose your NetSolar folder, then click **Make a copy**.
3. Do the same for the **Run Log**, naming it **Run Log**.
4. Inside your NetSolar folder, click **New** → **New folder** and name it **Customer Reports**.
5. Send Ubakel the links to the three items: right-click each one, choose **Share** → **Copy link**, and paste the links into an email to us.

You can rename or move these later, but please don't delete them or change the template's layout.

STEP 3 · ABOUT 10 MINUTES

Get your Gemini API key

Gemini, Google's AI, reads each bill and pulls out the numbers for the report. The system uses **Gemini 3.5 Flash-Lite**, the model it was built and tested with. You pay Google directly for what you use, about $10 a month.

1. Go to **aistudio.google.com** and sign in with the Google account from Step 1.
2. Click **Get API key**, then **Create API key**. If asked, create a new project named **NetSolar**.
3. Next to the new key, click **Set up billing** and add a payment card. This moves the key to the paid tier, which has higher limits and keeps your customers' bills private.
4. Copy the key. You'll paste it into Make in Step 4.

STEP 4 · ABOUT 10 MINUTES

Add four connections in Make

1. In Make, open **Connections** from the left menu and click **Create a connection**.
2. Choose the app from the table below and give it the name shown.
3. For the three Google apps, click **Sign in with Google**, choose the account from Step 1, **tick all the boxes** and click **Allow**. For Gemini, paste your key and click **Save**.
4. Repeat for all four, then email us to let us know.

App to choose	Name it	How to connect
Google Drive	NetSolar – Google Drive	Sign in with Google, then **Allow**
Google Sheets	NetSolar – Google Sheets	Same account, then **Allow**
Gmail	NetSolar – Gmail	Same account, then **Allow**
Gemini AI	NetSolar – Gemini	Paste the key from Step 3

STEP 5 · UBAKEL

Go live

1

Your team inbox

Tell us which email address should receive the "report ready" and "needs review" emails.

2

Your form

Give us access to your GoHighLevel form, or we'll send you the new address to paste in.

We then build the system in your account, test it with real bills, switch your form over and email you when it's live.

RUNNING COSTS

What it costs each month

Estimates for **50–70 full requests a month**, each with 12 monthly bills, a pre-solar bill and a production file.

≈ $0.16
Gemini cost of one full customer report

$8–11
a typical month

$0
Google Drive and Gmail

Service	Plan	Typical month	Notes
Gemini	Gemini 3.5 Flash-Lite, pay as you go	**$8–11**	About $0.16 per full request
Google Drive	Free 15 GB	**$0**	After about a year, 100 GB costs about $2 a month
Gmail	Your Google account	**$0**	
Total		**$8–11**	About $0.16 per full customer report
